According to our (Global Info Research) latest study, the global 2 Wheeler Fuel Injection System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

There are two popular versions of fuel injection - port fuel injection and direct injection. Port fuel injection is more commonly used due to lower costs whereas direct fuel injection is the latest development in fuel injection systems. The direct injection system is designed specifically for four or two stroke engines. The main benefit of using direct injection in a 2-wheeler is that the fuel and air can be perfectly released and then injected into the cylinder according to the engine load capacity.

Asia-Pacific is expected to see growth in the fuel injection market due to the increasing number of manufacturers adopting the fuel injection systems, since these systems offer better performance and efficiency.
