Abstracts

According to our (Global Info Research) latest study, the global 2,2'-Dithiodibenzoic Acid market size was valued at US\$ 18.11 million in 2025 and is forecast to a readjusted size of US\$ 23.24 million by 2032 with a CAGR of 3.6% during review period.

2,2'-Dithiodibenzoic Acid is a brown or yellow powdery organic compound, mainly used as an intermediate in pharmaceuticals, dyes, bactericides, and photoinitiators, as well as a sulfhydryl-modifying agent. It is a toxic substance, existing as a solid powder at room temperature and pressure, insoluble in water but soluble in alcoholic organic solvents.

The upstream raw materials for 2,2'-Dithiodibenzoic Acid mainly include salicylic acid, sulfur chloride, or other sulfiding agents; its downstream applications are highly concentrated in the scientific research field, serving as a key building block for synthesizing organic ligands with special photoelectric properties, novel drug candidates, and functional polymer materials. Currently, large-scale industrial application has not yet been achieved.

In 2025, global sales volume is approximately 2,800 tons, the average selling price for major enterprises is around \$6,300 per ton, and the gross profit margin for key industry producers ranges from approximately 22% to 30%.

2,2'-Dithiodibenzoic Acid is an organic sulfur fine chemical intermediate characterized by relatively low production volumes and concentrated downstream applications; market demand is primarily driven by the production of UV-curable inks and coatings,

thioxanthone-based photoinitiators, and BIT-based industrial preservatives. Industry growth is also influenced by the synthetic routes adopted by downstream manufacturers, as certain photoinitiators and BIT products can alternatively be produced using thiosalicylic acid, ortho-halobenzoic acids, or other sulfur-containing raw materials. Key challenges on the production side include safety control during low-temperature diazotization, handling of sulfur dioxide or sulfides, treatment of sulfur-containing wastewater and off-gases, and the control of product color, purity, and residual sulfur impurities. Future development will focus on high-purity, light-colored, and low-impurity products, as well as clean production processes that minimize wastewater generation.
