Abstracts

The global 2,2,2-Trifluoroethyl Triflate market size is expected to reach \$ 23.06 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

2,2,2-Trifluoroethyl triflate is an organosulfonate (triflate) ester formed from trifluoromethanesulfonic acid (triflic acid) and 2,2,2-trifluoroethanol. It is typically supplied as a colorless to light-yellow liquid and is well known as a highly reactive electrophile / trifluoroethylating reagent because the triflate (OTf) is an excellent leaving group.

Upstream, it is commonly made by reacting 2,2,2-trifluoroethanol with an activated triflate source such as trifluoromethanesulfonic anhydride (Tf₂O). Commercial handling typically emphasizes moisture sensitivity and storage under inert gas / cool & dark conditions, reflecting the compound's reactivity. Downstream, it is used as a trifluoroethylating/alkylating reagent for nucleophiles, and appears in pharmaceutical intermediate synthesis as a step to install the 2,2,2-trifluoroethyl group.

In 2025, global sales of 2,2,2-trifluoroethyl triflate reached approximately 81 tons, with an average global market price of around US\$ 195/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 25% to 60%.
