Abstracts

The global 24GHz mmWave Sensor market size is expected to reach \$ 171 million by 2032, rising at a market growth of 7.9% CAGR during the forecast period (2026-2032).

In 2025, global production of 24GHz mmWave sensors reached 2.96 million units, with an average selling price of \$33 per unit. A 24GHz mmWave sensor refers to a short-range radar sensor operating in the approximately 24.0-24.25GHz ISM band or adjacent to the 24GHz band. It typically employs Doppler, FSK, FMCW, and other radar systems, detecting the presence, movement, speed, direction, distance, micro-motions, human presence, vehicle approach, or obstacle avoidance by transmitting and receiving millimeter-wave signals. 24GHz millimeter-wave sensors feature non-contact operation, penetration of certain non-metallic obstructions, resistance to light interference, privacy protection, relatively low cost, and suitability for short-range sensing. They are widely used in smart lighting, human presence detection, security doorbells, automatic doors, smart homes, robotics, industrial speed measurement, traffic monitoring, automotive short-range radar, and elderly care applications. The upstream includes radar SoCs, RF front-ends, antennas, PCBs, MCUs, power management, and high-frequency materials; the midstream consists of 24GHz radar sensor manufacturers; and the downstream connects lighting, building, security, automotive, industrial automation, robotics, and smart home companies. Gross profit margins range from approximately 20% to 40%.
