The 25G Backflush Instrument is a minimally invasive intraocular fluid management instrument used in vitreoretinal surgery. Its needle diameter corresponds to approximately 0.5mm and typically consists of a backflush handle, a negative pressure or reservoir, an aspiration interface, and a blunt, soft, silicone, polyurethane, or brush-tipped needle. The instrument allows for passive aspiration via the flute-shaped vent, valve, or reservoir, and can be connected to vitrectomy equipment, negative pressure tubing, or a syringe for active aspiration. Pressing the reservoir or backflush button releases aspirated fluid, blood, debris, or tissue back into the eye or clears blockages.
