According to our (Global Info Research) latest study, the global 2D Codes Anti-counterfeiting Solution market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A 2D Code Anti-counterfeiting Solution is a security system designed to prevent and detect counterfeiting through the use of two-dimensional (2D) barcodes, also known as QR codes (Quick Response codes) and data matrix codes. These codes are widely used for various purposes, including product labeling, packaging, and documentation, and they can be harnessed to enhance security and authenticate products. A 2D Code Anti-counterfeiting Solution typically involves the following components:

Unique 2D Codes: Each product or item in the system is assigned a unique 2D code. These codes are often generated through secure and controlled processes to ensure uniqueness and security.

Secure Database: The solution is linked to a secure database that stores information about each 2D code, including production details, authenticity status, and additional product information.

Authentication Process: Consumers or users can scan the 2D code using a mobile device or a dedicated scanner to verify the product's authenticity. The system checks the code against the database and provides immediate feedback.

Tamper-evident Features: Some 2D codes incorporate tamper-evident features, making it challenging for counterfeiters to replicate or tamper with them.
