2D Laser Micro Trimming Equipment is a high-precision laser technology-based processing device that is used for plane processing. It is mainly used for fine cutting, trimming, and engraving on the edges of precision components or materials. This equipment is typically equipped with a high-resolution laser head and a precision control system, which can accurately control the path and intensity of the laser beam in a two-dimensional plane, thereby achieving non-contact processing of complex structures. Its application fields are wide-ranging, including electronic manufacturing, medical device production, jewelry processing, and automotive parts manufacturing, and is particularly suitable for processing products with extremely high precision requirements, thin material thickness, and complex shapes. For example, in electronic manufacturing, 2D laser micro edge trimming equipment can be used to trim the edges of circuit boards, remove burrs, or engrave complex patterns or marks on miniature components.
