## Abstracts

According to our (Global Info Research) latest study, the global 2D Laser Processing Machines market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

2D laser processing machine refers to equipment that can perform laser processing in a two-dimensional plane. It mainly realizes the rapid capture and processing of the surface shape of an object through the precise projection and reception of the laser beam. The laser beam scans the surface of the object at a certain speed. When the laser beam irradiates the surface of the object, part of the light will be reflected back to the receiver. At the same time, the scanning device records the scanning angle of the laser beam, thereby obtaining the two-dimensional coordinate information of the surface of the object, and then performing precise processing operations.
