## Abstracts

The global 2D Position Sensitive Detector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The 2D position sensitive detector is a semiconductor sensitive element based on the lateral photoelectric effect (the phenomenon that voltage and current signals change with the position of the light spot), and converts the intensity and displacement of the light spot irradiated on the photosensitive surface into electrical signals to achieve location detection. The detector usually consists of two photosensitive units, and has the characteristics of high sensitivity, high resolution, fast response, and wide application.
