## Abstracts

According to our (Global Info Research) latest study, the global 2-in-1 Wireless Chargers market size was valued at US\$ 395 million in 2025 and is forecast to a readjusted size of US\$ 556 million by 2032 with a CAGR of 5.0% during review period.

A 2-in-1 wireless charger is a charging device that can wirelessly charge two devices simultaneously, typically a smartphone and wireless earphones, or a smartphone and a smartwatch. Its core working principle is based on electromagnetic induction or magnetic resonance technology, transmitting electrical energy wirelessly to the receiving device without the need for a charging cable.

The upstream mainly includes suppliers of raw materials and core electronic components, such as high-purity copper coils, power management chips, wireless charging control chips, inductors, capacitors, magnetic materials, as well as plastic casings and silicone anti-slip pads, providing the basic raw materials and key components for charger design and manufacturing. The midstream involves manufacturing and assembly, including 2-in-1 wireless charger design companies, OEM/ODM manufacturers, mold processing plants, and testing and quality control departments, responsible for product development, functional integration, assembly, and quality inspection. Representative companies include Anker, Belkin, and Mophie. Meanwhile, OEMs in China and Southeast Asia handle the majority of global production capacity. The downstream involves sales and distribution, including online e-commerce platforms, offline 3C digital retail stores, brand specialty stores, and gift or office supply channels.

In 2025, global sales of 2-in-1 wireless chargers will reach 21 million units, with a

production capacity of approximately 30 million units, an average selling price of US\$18.3 per unit, and an average gross profit margin of 25%-35%.

In terms of demand structure, the growth of 2-in-1 wireless chargers is mainly driven by the rapid popularization of wearable and mobile devices such as smartphones, smartwatches, and wireless earphones. Home, office, and travel are the primary usage environments, with office desks and bedroom nightstands being the most widespread applications. With the global unification and promotion of wireless charging standards (such as Qi/Qi2 and MagSafe), consumers' acceptance of a 'one-stop' multi-device charging experience continues to increase. Especially in North America, Europe, China, and Southeast Asia, multi-device chargers are gradually becoming standard equipment for desktop and travel electronic devices.

Product and technology roadmaps are evolving from early simple multi-coil parallel designs towards high efficiency, intelligence, and safety. Mainstream products have widely adopted multi-coil designs, intelligent power distribution, temperature monitoring, foreign object detection, and MagSafe magnetic positioning to achieve efficient charging between devices and improve user experience. Some high-end products also support USB-C fast charging input, LED status indicators, and foldable portable designs. Future technological evolution directions also include higher-power fast charging, multi-protocol compatibility, and intelligent ecosystem adaptation to meet the wireless charging needs of different brands and devices.
