Abstracts

The global 3-Amino-1-Propanesulfonic Acid market size is expected to reach \$ 6.54 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

3-Amino-1-Propanesulfonic Acid, commonly referred to as APS, is an organic compound with a chemical structure of $\text{NH}_2\text{CH}_2\text{CH}_2\text{SO}_3\text{H}$. It is an amino sulfonic acid with one amino propane group and one sulfonic acid group. APS has a wide range of applications in the fields of chemistry and biochemistry. APS is mainly used as a catalyst for reducing and oxidizing agents, and is widely used in chemical synthesis and biochemical experiments. It can be used in the fields of preparing peroxides, organic synthesis reactions, polymer synthesis, and biological analysis. In biotechnology, APS is also commonly used as one of the components of electrophoresis gel for the electrophoresis separation of DNA or protein. In 2025, global 3-Amino-1-Propanesulfonic Acid production reached approximately 46.5 Tons, with an average global market price of around US\$ 88 per kg.

3-Amino-1-Propanesulfonic Acid is a fine chemical with small batch size, high added value, strong research and development, and pharmaceutical properties. The market demand does not come from bulk chemical consumption, but is concentrated in the research of pharmaceutical intermediates, neuroscience research, alcohol-related substances, candidate compounds for Alzheimer's disease and neuroprotection, drug quality analysis, and standard system. The market characteristic of this product is that downstream customers are dispersed but highly specialized, and the purchasers usually include pharmaceutical research and development enterprises, CRO laboratories, university research institutions, quality research departments of pharmaceutical companies, and fine chemical traders. Due to the presence of both amino and sulfonic

acid groups in its structure, salt type regulation, derivative synthesis, and drug impurity research can be carried out in the future. Therefore, it has stable application value in the development of nervous system drugs and sulfonic acid functionalized molecules.
