## Abstracts

The global 3-(Aminomethyl)tetrahydrofuran market size is expected to reach \$ 40.00 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

In 2025, global 3-(Aminomethyl)tetrahydrofuran production reached approximately 7,860 tons, with an average global market price of around US\$3,626 per ton.

3-(Aminomethyl)tetrahydrofuran (CAS 165253-31-6) is a versatile chemical intermediate, also known as (tetrahydrofuran-3-yl)methanamine or oxolan-3-ylmethanamine (C<sub>5</sub>H<sub>11</sub>NO). It is widely used in the pharmaceutical and agrochemical industries, particularly as a key building block for synthesizing novel drugs and the insecticide dinotefuran.

3-(Aminomethyl)tetrahydrofuran serves as a critical saturated heterocyclic fine chemical intermediate, holding a strategic position in global pharmaceutical R&D and advanced material synthesis. The current development status indicates a transition from laboratory-scale production to established industrial supply, with core manufacturing capacities concentrated among suppliers possessing sophisticated hydrogenation and chiral resolution technologies. As the pharmaceutical industry increasingly favors non-aromatic, rigid scaffold structures, its role as a building block is gaining prominence for enhancing the solubility and pharmacokinetic profiles of drug candidates.

Regarding development trends, the market is shifting toward high-purity and isomer-specific customization, particularly in the synthesis of CNS and oncology therapeutics where the 3-substituted tetrahydrofuran ring is valued for optimizing target engagement. Opportunities are primarily driven by the continuous expansion of pharmaceutical outsourcing (CXO) and the growing demand for bio-isosteres in green chemistry. However, significant barriers remain: the synthesis pathways are relatively complex,

relying heavily on high-pressure catalytic hydrogenation, which maintains high production costs. Furthermore, tightening global regulations on volatile organic compounds (VOCs) and stringent safety requirements for chemical storage present ongoing compliance challenges for manufacturers in this sector.

This report studies the global 3-(Aminomethyl)tetrahydrofuran production, demand, key manufacturers, and key regions.
