## Abstracts

According to our (Global Info Research) latest study, the global 3-(Benzyldimethylammonio)propanesulfonate market size was valued at US$ 5.78 million in 2025 and is forecast to a readjusted size of US$ 8.19 million by 2032 with a CAGR of 5.1% during review period.

In 2025, the global sales volume of 3-(Benzyldimethylammonio)propanesulfonate is estimated at approximately 6.3 tons, with the mainstream ex-factory average price at around USD 892/kg. The gross margin of major manufacturers is approximately 40%?60%.

3-(Benzyldimethylammonio)propanesulfonate is a zwitterionic sulfobetaine fine chemical with CAS No. 81239-45-4, commonly referred to by its commercial or laboratory abbreviation NDSB-256. Its molecular structure contains both a quaternary ammonium cation and a sulfonate anion, giving it good water solubility and protein compatibility. It belongs to the category of non-detergent sulfobetaine. Unlike conventional surfactant, this product is generally not used for strong detergency, emulsification or foaming. Instead, it is mainly used to regulate the protein solution environment, reduce protein aggregation, precipitation and nonspecific interaction, and improve the stability of protein sample during extraction, refolding, purification and analysis.

Its upstream raw material mainly includes benzyldimethylamine intermediate, propane sultone or related sulfonation reagent, solvent, purification reagent, and crystallization and drying auxiliary. Key production requirements include reaction selectivity, inorganic salt residue control, purity stability and batch-to-batch consistency. Downstream application mainly includes microsomal protein extraction, nuclear protein recovery,

protein refolding treatment, isoelectric focusing sample treatment and membrane-bound protein purification in biochemical research. End customer mainly includes life science reagent supplier, protein research institution, proteomics laboratory, drug discovery organization and scientific research laboratory.
