According to our (Global Info Research) latest study, the global 3-Chloroisoquinoline market size was valued at US\$ 2.35 million in 2025 and is forecast to a readjusted size of US\$ 3.60 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global sales volume of 3-Chloroisoquinoline was approximately 3.5 tons, with an average global market price of about USD 650/kg. The gross margin of major producers in the industry was generally around 35%-55%.

3-Chloroisoquinoline is a nitrogen-containing aromatic heterocyclic fine chemical intermediate, with CAS No. 19493-45-9 and molecular formula C₉H₆ClN. The product is based on an isoquinoline skeleton with a chlorine substituent introduced at the 3-position, giving it good reactivity for subsequent substitution, coupling, amination and structural modification reactions.

The upstream of its industry chain mainly includes isoquinoline-based parent materials, chlorinating agents, solvents, catalysts, alkalis, refining auxiliaries and packaging materials. The midstream involves the synthesis, purification, testing and customized production of 3-Chloroisoquinoline, with core competitiveness reflected in impurity control, batch-to-batch stability and small-batch scale-up capability. The downstream is mainly applied in medicine, agrochemical, electronic material and other fine chemical fields, where it is used to construct high-value-added functional molecules containing isoquinoline structures.
