Abstracts

The global 3-Mercapto-1, 2 Propanediol market size is expected to reach \$ 46.84 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

In 2025, the global production of 3-Mercapto-1,2-propanediol reached approximately 2,400 tons, with an average selling price of USD 11,500 per ton, a production capacity of approximately 3,200 tons, and a gross margin of 28.0%.

3-Mercapto-1,2-propanediol, also known as 1-thioglycerol, monothioglycerol, thioglycerin, or thioglycerol, has CAS No. 96-27-5, the molecular formula $C_3H_7O_2S$, and a molecular weight of 108.16. It is generally a colorless to pale-yellow, viscous, hygroscopic liquid with a mild sulfurous odor. It is miscible with water and various alcohols and combines the reducing and chain-transfer properties of a thiol group with the water solubility provided by two hydroxyl groups. Its principal uses include pharmaceutical antioxidants, pharmaceutical and fine-chemical intermediates, polymerization regulators, metal rust-prevention and surface-treatment agents, cosmetic reducing agents, and raw materials for functional sulfur compounds.

The global 3-Mercapto-1,2-propanediol market is a small but high-value segment of the specialty sulfur-containing fine-chemicals industry. Demand mainly comes from pharmaceutical excipients and formulation stabilizers, sulfur-containing pharmaceutical intermediates, water-soluble polymer production, electronics and metal-surface treatment, and specialized cosmetic formulations. Key technical barriers include controlling sulfur-based reactions, odor and impurity management, product color, purity, storage stability, and environmental and safety compliance. Public supplier information indicates that mainstream industrial products are generally offered at 98% or 99% purity

and supplied in 22-kilogram containers, 200-liter chemical drums, or other bulk packages, confirming that the market is based primarily on industrial-scale supply rather than laboratory reagent sales.
