The global 3-Mercaptopropionic Acid market size is expected to reach \$ 190 million by 2032, rising at a market growth of 8.8% CAGR during the forecast period (2026-2032).

3-Mercaptopropionic acid (3-MPA) is an organic compound containing a thiol group (-SH) and a carboxyl group (-COOH), with a chemical formula of C₃H₆O₂S. It is a hydrophilic and electrophilic chemical reagent widely used in chemical synthesis, surface modification and catalytic reactions.

The 3-Mercaptopropionic Acid (3-MPA) market is a specialized segment within the chemical industry, driven by its applications in industries such as pharmaceuticals, agrochemicals, and materials science. This compound, known for its thiol functional group, is primarily used as a building block in the synthesis of various chemicals, including polymers and resins, and as a reagent in biochemistry and chemical research. The market is influenced by the increasing demand for advanced materials, particularly in coatings, adhesives, and rubber, where 3-MPA can enhance properties like adhesion and chemical resistance. Growth in the pharmaceutical sector, with its use in drug formulations and biotechnological applications, also contributes to the market's expansion. As industrial production techniques improve and global demand for specialized chemicals rises, the 3-MPA market is expected to see steady growth, especially in regions like North America, Europe, and Asia.
