Abstracts

According to our (Global Info Research) latest study, the global 3-Ply Formwork Sheets market size was valued at US\$ 613 million in 2025 and is forecast to a readjusted size of US\$ 819 million by 2032 with a CAGR of 4.1% during review period.

3-Ply Formwork Sheets are timber sheets made from three cross-laminated layers of softwood, designed as a reusable facing material for concrete formwork. Typical products are spruce-based, crosswise glue-bonded, and commonly protected by a melamine / urea-melamine resin coating to reduce concrete adhesion and improve cleaning and durability.

The upstream supply chain is mainly softwood logs/lumber (spruce/fir/pine) plus bonding and protection chemistries: water-/weather-resistant gluing systems and surface/edge protection (melamine/urea-melamine coatings, edge sealants such as emulsion/acrylic coatings, and optional edge strips/battens or metal edge protection). Some producers also emphasize certified wood sourcing (e.g., PEFC).

Downstream, these sheets are used within formwork systems or as loose sheets for horizontal and vertical concrete formwork, including slabs, walls and other concrete structures; they are also commonly used alongside timber beams and accessories in jobsite formwork setups.

In 2025, global sales of 3-Ply Formwork Sheets reached approximately 33 million m², with an average global market price of around US\$ 18/m². Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 10% to 20%.
