## Abstracts

The global 3-Ply Formwork Sheets market size is expected to reach \$ 819 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

3-Ply Formwork Sheets are timber sheets made from three cross-laminated layers of softwood, designed as a reusable facing material for concrete formwork. Typical products are spruce-based, crosswise glue-bonded, and commonly protected by a melamine / urea-melamine resin coating to reduce concrete adhesion and improve cleaning and durability.

The upstream supply chain is mainly softwood logs/lumber (spruce/fir/pine) plus bonding and protection chemistries: water-/weather-resistant gluing systems and surface/edge protection (melamine/urea-melamine coatings, edge sealants such as emulsion/acrylic coatings, and optional edge strips/battens or metal edge protection). Some producers also emphasize certified wood sourcing (e.g., PEFC).

Downstream, these sheets are used within formwork systems or as loose sheets for horizontal and vertical concrete formwork, including slabs, walls and other concrete structures; they are also commonly used alongside timber beams and accessories in jobsite formwork setups.

In 2025, global sales of 3-Ply Formwork Sheets reached approximately 33 million m<sup>2</sup>, with an average global market price of around US\$ 18/m<sup>2</sup>. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 10% to 20%.
