## Abstracts

According to our (Global Info Research) latest study, the global 3-Terminal Feedthrough MLCC market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

3-terminal feedthrough multilayer ceramic capacitors (MLCC) is a type of ceramic capacitor that is used for signal filtering and decoupling applications. The '3-Terminal' refers to the fact that the capacitor has three electrical connections: a signal line (input), a ground line, and a power line. The feedthrough design of the capacitor allows it to be mounted directly through the surface of a printed circuit board (PCB), which makes it an effective solution for filtering high-frequency noise on power supply lines.
