## Abstracts

The global 3-Terminal Feedthrough MLCC market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

3-terminal feedthrough multilayer ceramic capacitors (MLCC) is a type of ceramic capacitor that is used for signal filtering and decoupling applications. The '3-Terminal' refers to the fact that the capacitor has three electrical connections: a signal line (input), a ground line, and a power line. The feedthrough design of the capacitor allows it to be mounted directly through the surface of a printed circuit board (PCB), which makes it an effective solution for filtering high-frequency noise on power supply lines.
