## Abstracts

According to our (Global Info Research) latest study, the global 3 Way Coolant Flow Control Valve market size was valued at USD 96 million in 2022 and is forecast to a readjusted size of USD 158.4 million by 2029 with a CAGR of 7.5% during review period.

Thermal management is the capacity of controlling a system and its subsystems' temperature; for instance, e-machine, cabin, battery, engine, etc. An effective coolant flow controller is required within this system for closing the coolant flow, regulating the coolant flow, and switching over coolant circuits. This coolant flow control valve allows functions to decrease the engine's heat up time via engine zero flow, allowing quicker cabin heat up by heading the heat to the heat exchanger core and for decreasing the coolant flow for an optimized temperature of the engine. 3-way valve can control the fluid exchange between three separate transfer lines.
