The 360-degree holographic projection cabinet, also known as the four-sided holographic display cabinet, is a four-sided cone made of transparent glass material. The three-dimensional image in it is directly suspended in the free space outside the device without the help of any screen or medium, and can be viewed at any angle 360 degrees. Viewing is a three-dimensional image display with a strong sense of three-dimensionality, giving visitors a strong visual impact. This kind of equipment usually consists of a cabinet, a spectroscope, a spotlight and a video playback device. Based on the principle of spectroscopy imaging, it uses special processing to build a three-dimensional model of the product through real shots, and superimposes the captured product image or product three-dimensional model image into the scene, forming a three-dimensional image with real dimensional space.
