Automated assembly equipment can automatically complete the predetermined loading and unloading of workpieces, positioning and clamping, workpiece conveying, assembly, packaging, testing and other processes and processes according to programs and algorithms. The specific assembly process includes: cutting boards, laminating antennas, covers, camera and other module installation, lens installation, battery installation, shell assembly, etc. Since the assembly process is more trivial and is also the step that uses the most manpower, there are many varieties of automated assembly equipment. Generally, automated assembly systems can be divided into two types: 1) Rigid automated assembly systems based on mass production assembly: composed of special assembly equipment and special process equipment. 2) Flexible assembly systems based on flexible manufacturing systems: composed of assembly centers and assembly robots.
