Abstracts

The global 3D Ablation Catheter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A 3D ablation catheter is a catheter used in cardiac ablation procedures to treat heart rhythm disorders such as atrial fibrillation and atrial flutter. It is a minimally invasive procedure that uses a catheter to deliver energy to the heart tissue, creating a scar that blocks the abnormal electrical signals that cause the arrhythmia. 3D ablation catheters are designed to provide a three-dimensional view of heart tissue and help guide the catheter to the precise location of the arrhythmia.
