Abstracts

3D automated optical inspection system is a device that detects common defects encountered in welding production based on optical principles. Automated optical inspection is a new type of testing technology emerging, but it is developing rapidly. Many manufacturers have introduced automated optical inspection and testing equipment. When automatic detection, the machine automatically scans the PCB through the camera, collects the images, and compares the tested solder joints with the qualified parameters in the database. After image processing, the defects on the PCB are checked out, and the defects are displayed / marked by the display or automatic signs. Come out for repairs.
