According to our (Global Info Research) latest study, the global 3D Bladder Scanners market size was valued at USD 79 million in 2023 and is forecast to a readjusted size of USD 112.4 million by 2030 with a CAGR of 5.1% during review period.

A bladder scanner is a medical device that utilizes ultrasound to noninvasively measure the amount of urine in the bladder or to determine how much urine remains in the bladder after urination as a way to measure residual levels. The type of scanner is a niche ultrasound system that provides fast and reliable information to aid in the diagnosis and treatment of urological conditions, access urinary retention, prevents unnecessary catheterization and reduces incidents of urinary tract infections (UTIs).

Scanners are portable machines that are about the size of a laptop computer and are usually mounted on a roller stand. These devices are found in hospitals, home health agencies, long-term care centers and other health care facilities.

Bladder scanner consists of monitor and scanner and can speedily complete the detection of bladder area through scan of probe connected with the device, and transmit signal detected to embedded computer system after processing before computer identify the edge of image, volume calculation, and display relative information through LCD or built-in printer before achieve the examination of patient bladder and give an effective comment in time during patient bladder treatment.

Increasing Prevalence of Urinary Disorders: The rising prevalence of urinary disorders, such as urinary incontinence, urinary retention, and urinary tract infections, drove the demand for accurate and non-invasive diagnostic tools like 3D bladder scanners. These

scanners provided healthcare professionals with real-time information about bladder volume and urinary flow, aiding in diagnosis and treatment planning.

Growing Aging Population: With the global population aging, there was a higher incidence of age-related bladder issues, such as urinary retention and benign prostatic hyperplasia (BPH). 3D bladder scanners offered a convenient and effective way to assess bladder function in elderly patients.
