Abstracts

Cardiac mapping is a technique in which the information from cardiac electrograms is gathered and displayed. Cardiac mapping is used to diagnose the heart rhythms especially in case of arrhythmia. The cardiac mapping procedure is usually done by inserting catheter into the heart chamber percutaneously and recording the electrograms sequentially, this is done in order to correlate the electrograms with cardiac anatomy. The new 3D cardiac mapping systems create the three dimensional model of any chamber of heart and can track exact location of the catheter. This allows movement of the catheters without using X-ray. They are designed to improve the resolution and gain prompt cardiac activation maps.

SCOPE OF THE REPORT:

This report studies the 3D Cardiac Mapping System market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the 3D Cardiac Mapping System market by product type and applications/end industries.

The 3D cardiac mapping system market is anticipated to grow with a significant CAGR owing to the increase in number of patients with arrhythmia and other cardiac disorders, rising pressure to reduce diagnosis errors and increasing healthcare expenditure. The major factors driving the growth of 3D cardiac mapping systems is the precision and patient safety enabled by real-time monitoring. The increase in aging population who are more prone to chronic heart disorders will elevate the demand for the 3D cardiac mapping system. The increase in prevalence and diagnosis rate of cardiac illness is the major factors which is creating the demand for 3D cardiac mapping systems. The 3D cardiac mapping also help in reducing the time of diagnosis. The restraining factors for

the 3D cardiac mapping system market are high cost of services and limited adoption rate of the systems.

North America contributes maximum share to the 3D cardiac mapping system market. European countries are expected to represent significant growth rates due to the growing healthcare practices. Amongst the Asian countries, India and China are more promising due to large population pool, increased prevalence of cardiac diseases, increasing awareness, rapid improvement in healthcare services with the saturation in the developed markets.

The global 3D Cardiac Mapping System market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of 3D Cardiac Mapping System.
