## Abstracts

The global 3d Gait Analysis and Training System market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In clinical practice, common abnormal gaits include: hemiplegic gait, scissors gait, paraplegic gait, cerebellar ataxia gait, Parkinsonian gait, gluteus maximus weakness gait, gluteus medius weakness gait, quadriceps gait Weak head muscle gait, straddling gait, painful gait, knee hyperextension gait, crouching gait, etc. Abnormal gait can be quantitatively evaluated through the three-dimensional gait analysis and training system, and provides a basis for rehabilitation treatment. The 3D gait analysis and training system is mainly composed of 3D motion capture system, 3D force plate, wireless surface electromyography, and plantar pressure. The 3D gait analysis system collects the precise 3D coordinates of each joint point of the human body during walking, the pressure between the sole of the foot and the support surface (forces in vertical, left and right, and front and rear directions), combined with the EMG collected by the surface electromyography system Signals are reconstructed and modeled through professional gait analysis software to obtain gait parameters during human movement.

This report studies the global 3d Gait Analysis and Training System production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for 3d Gait Analysis and Training System, and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
