According to our (Global Info Research) latest study, the global 3D Integrated Mobile Map market size was valued at US$ 65080 million in 2024 and is forecast to a readjusted size of USD 112060 million by 2031 with a CAGR of 8.2% during review period.

The 3D integrated mobile map is a three-dimensional, abstract description of one or more aspects of the real world or a part of it based on a three-dimensional electronic map database. The network 3D electronic map not only provides users with map retrieval functions such as map query and travel navigation through the intuitive representation of geographical real scene simulation, but also integrates a series of services such as life information, e-government, e-commerce, virtual community, and travel navigation.

Compared with the traditional two-dimensional map, the 3D integrated mobile map has the advantages of being more real, intuitive and detailed, allowing users to have a deeper understanding of a place. Moreover, with the development of technology, the fidelity and sophistication of 3D integrated mobile maps will continue to improve. It is believed that future 3D maps will be more beautiful, easy-to-use, and practical, with a better prospect.
