According to our (Global Info Research) latest study, the global 3D Light Field Camera market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

3D light field cameras are cameras that use a single camera and a single master lens to obtain both 2D images and measured and calibrated 3D depth of field information in a single shot. The camera is constructed by adding a special micro-lens array between the camera's main lens and a high-quality sensor. Through the refraction of the lens, the image of the scene can be focused in front of the micro-lens array, through which the gathered image is re-imaged and projected into the high-quality image sensor.
