Abstracts

The global 3D Manikin market size is expected to reach \$ 3848.9 million by 2029, rising at a market growth of 10.1% CAGR during the forecast period (2023-2029).

The mannequin is imitated according to the real human body shape. Mannequins can change poses in response to various clothes, but most of them are standing. Mannequins are mostly seen in stores selling clothing. In addition, there are also mannequins showing the internal organs of the human body in hospitals and schools for educational purposes. Crash test dummies used in crash tests are also a type of mannequin. Mannequins and scarecrows are also commonly used in horror works because of the uncanny valley theory to render the horror atmosphere.
