The global 3D Modeling Software for Game market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

For the most part, video games are works of fiction. As such, many of their assets (characters, objects, and scenery) are actually created by artists – often using 3D modeling. 3D modeling for video games consists of creating all the assets that go into a scene. These include the characters and mobs (short for “mobile objects”, moving non-player characters), as well as their textures, illuminations, landscapes, and scenarios.
