Abstracts

3D optical profiler is a kind of profilometer using Non-contact technology. They are typically built on advanced optical microscopes, providing the dual advantages of excellent imaging and no contact with the surface being measured. They use a variety of light sources, usually using high-brightness LEDs, to illuminate the sample and sophisticated cameras to capture the images which are then converted into height information using techniques such as confocal microscopy or interferometry.

Scope of the Report:

This report focuses on the 3D Optical Profiler in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

North America is the largest market of 3D Optical Profiler based on production revenue. The product is used in Electronic & Semiconductor, Micromechanical Industry, Automotive & Aerospace and Life Science.

We tend to believe that this industry has a bright future, considering the current demand of 3D Optical Profiler. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

The worldwide market for 3D Optical Profiler is expected to grow at a CAGR of roughly 5.5% over the next five years, will reach 130 million US\$ in 2023, from 100 million US\$ in 2017, according to a new GIR (Global Info Research) study.
