Abstracts

The global 3D Oral Scanners market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

3D Oral Scanners collect visual data by inserting a scanning wand into a patient's mouth. Unlike a cast, which can only be inserted once, the scanner can scan an area over and over again until a complete rendering of the dental arch is completed. 3D Oral Scanners combined with 3D printing can instantly produce restoration models, dental crowns, etc. at the chairside. Doctors can obtain accurate oral data by scanning the patient's mouth with an oral scanner.

This report studies the global 3D Oral Scanners production, demand, key manufacturers, and key regions.
