Abstracts

According to our (Global Info Research) latest study, the global 3D Photogrammetry System market size was valued at US\$ 2301 million in 2025 and is forecast to a readjusted size of US\$ 4054 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global sales of 3D photogrammetry systems reached approximately 43,000 units, with an average selling price of US\$52,000. A 3D photogrammetry system is a device that uses high-speed cameras, multi-angle optical acquisition, and computer vision algorithms to perform high-precision 3D reconstruction and measurement of object surfaces, structures, and spatial positions. It is widely used in aerospace, automotive manufacturing, precision parts processing, cultural heritage digitization, and scientific research. The upstream raw materials for this system mainly include high-resolution camera sensors, optical lenses, laser projection and light source components, high-precision supporting mechanical structures, and control electronic components. Downstream suppliers are mainly manufacturing enterprises, research institutes, testing and quality control centers, and digital mapping service organizations. 3D photogrammetry systems provide crucial inspection and modeling tools for high-end manufacturing and scientific research by acquiring spatial geometric data non-contactly, with high precision, and quickly. Future development trends focus on high speed, intelligence, automation, and multi-technology integration to meet the precise measurement needs in complex environments.
