3D Point Cloud Annotation Services refer to specialized platforms or tools that provide the capability to label, classify, and organize 3D point cloud data. These services typically use advanced algorithms, machine learning, or manual input to assign meaningful annotations to individual points or groups of points within a 3D point cloud. The annotations can include labels, bounding boxes, surface normals, keypoints, or other relevant metadata that help describe the contents of the point cloud. These annotations are essential for training machine learning models, performing 3D object recognition, or enabling spatial analysis.
