According to our (Global Info Research) latest study, the global 3D Printed Dentures market size was valued at USD 962.6 million in 2023 and is forecast to a readjusted size of USD 1664.1 million by 2030 with a CAGR of 8.1% during review period.

3D printing, also known as Additive Manufacturing, is a different technology from subtractive machining, based on the patient's X-ray computed tomography or magnetic resonance imaging to establish a CAD model (Computer aided design (CAD)), which requires the integration of modern technologies such as CNC technology, laser or electron beam technology and materials science, from the CAD model of the part to achieve the construction of a three-dimensional complex entity by positioning the material layer by layer. A 3D printed denture is usually a direct component of a denture product that is completed using 3D printing technology or a key process in which 3D printing technology is applied, replacing the traditional process of closing the denture.
