## Abstracts

According to our (Global Info Research) latest study, the global 3D Printer Brass Nozzle market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A 3D printer brass nozzle is a component of a 3D printer that is responsible for extruding and depositing molten filament onto the build plate to create a physical object. It is usually made from brass, a popular choice due to its good thermal conductivity and wear resistance. The nozzle has a small opening called the orifice, through which the filament is pushed and melted using heat. Different nozzle sizes are available, ranging from small diameters for detailed prints to larger diameters for faster, less detailed prints. The choice of nozzle size can affect the print quality, speed, and functionality of the 3D object.
