3D printing i.e. Additive Manufacturing seems like it is a 21st-century concept, but it actually began three decades ago. It is a group of processes used to create a three-dimensional object where multiple layers of material are placed one on top of the other to create a physical object. It uses computer-aided design (CAD) to create almost any shape or geometry with digital data from 3D models or other electronic data sources like an Additive Manufacturing File (AMF). President Obama himself acknowledged its revolutionary potential in his 2013 State of the Union Address.

SCOPE OF THE REPORT:

This report studies the 3D Printing Creation Software market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the 3D Printing Creation Software market by product type and applications/end industries. Rising use of 3D models and the ability to create customised products anywhere and anytime are expected to be the biggest driver of the 3D printing and thereby 3D Printing Creation Software Market. In the short term, its biggest use is rapid prototyping of complex and customised low-volume goods. With the increase in printing speed, eliminations of object size restrictions, and favourable manufacturing economics, 3D printing will become increasingly important to average consumers in the days to come. The healthcare industry, in particular, is a focus area for it. The 3D Printing Creation Software Market can help patients print custom-fit hearing aids, orthopaedic implants like crowns, bridges and caps, make prosthetic limbs or personal hip/ knee replacements as per an individual's specific needs. The 3D Printing Creation Software Market can also be utilised by schools and colleges to create 3D models of geographic

regions, terrains, sculptures, or historical artefacts. This will improve the learning environment by spiking the student's curiosity and also enable them to touch, feel and see a close replica of the actual object without harming the latter.

The three main challenges for the 3D Printing Creation Software Market are those faced by 3D printers themselves ? cost, speed and limited materials. While the prices of 3D printers have surely come down since their invention thirty years ago, they still cost more than \$1500 on average. This makes it a difficult investment for people in developing countries with a limited disposable income. 3D printing is a very slow process which takes several hours if not days to print. This makes it unsuitable for any industry like fashion where fast-following or quick fads are the norm. It is also only feasible on thermoplastics, metals, alloys and ceramics at present, limiting its potential greatly.

The global 3D Printing Creation Software market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of 3D Printing Creation Software.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
