Abstracts

3D printing, the colloquial name for Additive Manufacturing, is a manufacturing technique of creating a digital blueprint with the help of Computer Aided Design (CAD) or animation software to create a solid, physical object. It was even mentioned by President Obama in his 2013 State of the Union Address as a truly transformative technology having the potential to revolutionise the world. 3D printing allows the conversion of ideas from fiction to fact. It uses a layer-by-layer approach for creating prototypes, spare parts and final products. It has been around for around thirty years now but is only just beginning to scratch the surface of its true potential in the 21st century.

SCOPE OF THE REPORT:

This report studies the 3D Printing in Aerospace and Defence market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the 3D Printing in Aerospace and Defence market by product type and applications/end industries.

The desire to improve manufacturing efficiency, productivity and quality is the main 3D printing Enabled Augmented Manufacturing Market driver. Companies that are deploying it aren't just replacing machines, but redesigning the entire production line. This makes the work more efficient, fast, simple, accurate and profitable. Lead time reductions and cost savings can be enormous. The second driver of the 3D printing Enabled Augmented Manufacturing Market is the wider range of materials available for use which boosts its appeal to several industries. 3D printers have used materials like advanced nickel alloy, glass, carbon fibre, conductive ink, pharmaceuticals, electronics,

and biological materials. These products can then be used in fields as diverse as aerospace & defence, medical, automotive, energy and the military. The U.S. is anticipated to be the largest 3D printing Enabled Augmented Manufacturing Market due to its global pre-eminence as a manufacturing hub. It is particularly dominant in industries like aerospace & defence, automobile manufacturing and medical device equipment and healthcare, all of which use 3D printing to a greater extent. China, Japan, and South Korea will drive the demand in the coming decade due to robust manufacturing industries and strong government support. The global 3D Printing in Aerospace and Defence market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of 3D Printing in Aerospace and Defence.
