## Abstracts

3D printing, also known as AM, is the process of making a 3D model by laying down many successive layers of a 3D material. It helps in manufacturing customized products at a mass level without incurring extra costs and other environmental impacts. During the advent of this technology, these models were restricted to prototyping purposes, but in recent times 3D printing technology has made a paradigm shift toward conventional product manufacturing in industries extending from aerospace to consumer products.
