Abstracts

Metal 3D printing has been widely adopted by the aerospace & defense industry across major regions. Titanium and its alloys are mainly used in aerospace engineering applications such as manufacturing of engine components as they offer high strength, are lightweight, and provide superior resistance to corrosion. Due to bio-compatibility, they are also used in biomedical applications such as orthopedic and dental implants as well as artificial knee and hip replacement surgeries. Titanium metal offers greater durability in terms of speed, accessibility, and affordability and is thus preferred in metal 3D printing activities for critical applications.

Scope of the Report:

This report focuses on the 3D Printing Metals in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

North America dominated the market share and is expected to display CAGR over 30% in terms of revenue. The presence of bigger companies that can afford 3D printing technology and early adoption of the technology are expected to propel the growth of the 3D printing metals market across the region.

Recent changes in the policies across the U.S. is expected to be favorable for 3D printable material growth. Policies to increase investment in defense and manufacturing sector are likely to fuel the demand of the market. Increase of R&D in the market across the region is further expected to drive the product development.

Asia Pacific is anticipated to witness significant growth, driven by rapidly growing manufacturing sector and high economic development in China, India, and South East Asian countries. However, high initial capital to adopt the technology is likely to restrain

demand for 3D printing metal markets.

China is expected to record high growth in utilizing the technology in the automotive industry. The economy being one of the largest manufacturers of automotive is likely to support the development of the product. Favorable government regulations are expected to bolster the market further across the economy.

The worldwide market for 3D Printing Metals is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
