## Abstracts

According to our (Global Info Research) latest study, the global 3D Printing Resin Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

3D Printing Resin Machines use photopolymerisation technology, which means that the liquid photopolymer is cured by irradiation with ultraviolet light. The UV light penetrates the transparent barrel, eventually forming the desired model. With each layer printed, the forming platform is lowered to its initial position and the print fixed to the platform is raised as if from a pool of resin.
