Abstracts

The global 3D Printing Resin Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

3D Printing Resin Machines use photopolymerisation technology, which means that the liquid photopolymer is cured by irradiation with ultraviolet light. The UV light penetrates the transparent barrel, eventually forming the desired model. With each layer printed, the forming platform is lowered to its initial position and the print fixed to the platform is raised as if from a pool of resin.

This report studies the global 3D Printing Resin Machine production, demand, key manufacturers, and key regions.
