## Abstracts

In computer vision and computer graphics, 3D reconstruction is the process of capturing the shape and appearance of real objects. This process can be accomplished either by active or passive methods. If the model is allowed to change its shape in time, this is referred to as non-rigid or spatio-temporal reconstruction.

Currently there are three methods of 3D Reconstruction Software, Based on Images and Video and Based on 3D Scanning. In future, the technology on Images will dominate the market. The 3D Reconstruction Technology market is in promotion and innovation stage, and it is widely believed the 3D Reconstruction Technology will be a useful technique and will change the world. More and more investors are willing to invest the 3D Reconstruction Technology market. It is only a matter of time.
