The global 3D Sensing Camera DOE Components market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

DOE Diffractive Optical Elements (DOE Diffractive Optical Elements) is a kind of optical elements that are based on the diffraction principle of light, use computer-aided design, and through the semiconductor chip manufacturing process, etch on the substrate (or the surface of traditional optical devices) to produce a stepped or continuous relief structure (generally grating structure), and form a coaxial reproduction with high diffraction efficiency. Different designs are used to control the divergence angle of the beam and the shape of the light spot to achieve the function of the beam forming a specific pattern.
