The 3D shape measurement laser microscope is a microscope device that uses laser scanning technology to perform high-precision 3D shape measurement on the surface of an object. Through the principle of laser focusing and reflection, it can obtain microscopic morphological data of the sample surface and generate high-resolution 3D images. The device is widely used in the fields of material surface analysis, nanotechnology, semiconductor manufacturing, life sciences, etc. It can accurately measure microscopic parameters such as surface roughness, profile, thickness, and provide detailed shape analysis.
