Abstracts

According to our (Global Info Research) latest study, the global 3D Structured Light Type Sensor Module market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The principle of the 3D structured light scheme is to use an infrared light source. The emitted light is projected onto the object through a certain code. When these patterns are reflected back from the object surface, different deformations will occur with different distances from the object. The image sensor will take pictures of the deformed patterns. Based on the triangulation method, the corresponding parallax can be obtained by calculating the deformation amount of each pixel in the captured pattern, so as to further obtain the depth value.
