Abstracts

According to our (Global Info Research) latest study, the global 3D Telepresence market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Telepresence refers to a set of technologies which allow a person to feel as if they were present, to give the appearance of being present, or to have an effect, via telerobotics, at a place other than their true location. Telepresence requires that the users' senses be provided with such stimuli as to give the feeling of being in that other location.

Additionally, users may be given the ability to affect the remote location. In this case, the user's position, movements, actions, voice, etc. may be sensed, transmitted and duplicated in the remote location to bring about this effect. Therefore information may be traveling in both directions between the user and the remote location.

By taking advantage of recent advances in augmented reality (AR), coupled with 3D, such as Atheer AiR Glasses, Google Glass, and Microsoft HoloLens, the remote consumer's digital representations could be rendered over the real world, creating a mixed-reality experience. This in turn, is expected to drive the 3D telepresence market.
