According to our (Global Info Research) latest study, the global 3D Virtual Fence market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

3D virtual fences are virtual fences employed in place of regular fences. Unlike traditional fences or barricades, virtual fence detects real-time intrusions through 3D stereo cameras and laser technologies. The system then notifies the intrusions to the network to take necessary action.

The APAC region is expected to display the highest growth rate owing to increasing adoption of these fences in several countries, like India, where an increase in the infiltration attempts across its border areas has been witnessed.
